## **DTV Course – Basic**

About Course

#### Goal

This course introduces students to DTV standards, iWedia Middleware implementation and Android TV stack on Android based STB devices.

# **Environment setup and day 1 goal**

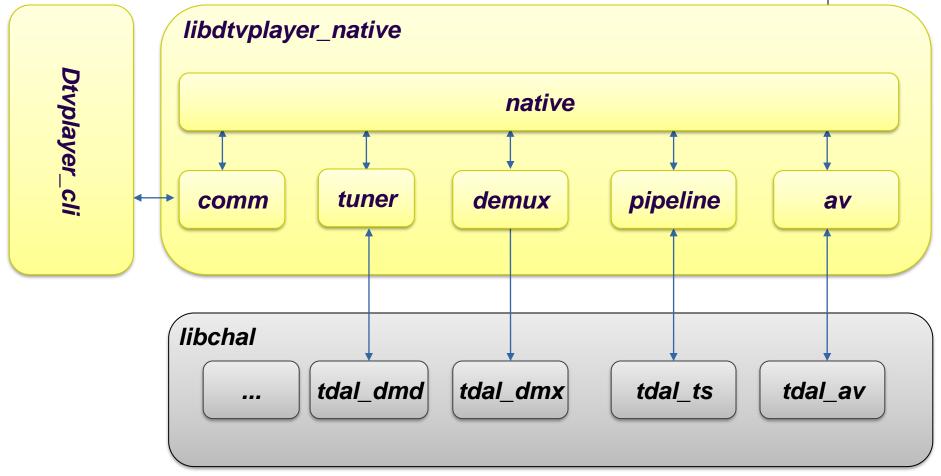

- Download development tools:
  - Android NDK: https://developer.android.com/ndk/downloads
  - Android ADB (install on Ubuntu 20.04)

sudo apt install android-tools-adb sudo apt install android-tools-fastboot

- Alternatively download adb: https://developer.android.com/tools/releases/platformtools#downloads
- Setup target device
- Compile and test exercise
- Introduction with software architecture

## Software arhitecture

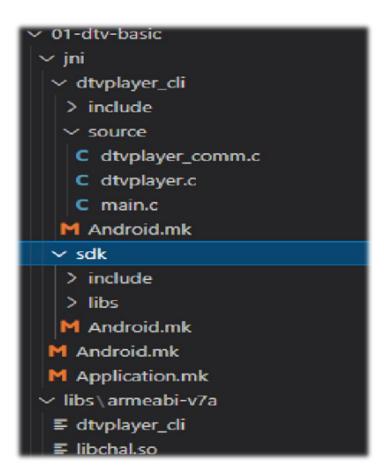

- jni\dtvplayer\_cli
  - Main code location
- jni\sdk
  - SDK library and header location
- libs\armeabi-v7a
  - Compilation output location

### **Useful commands**

- Connect to STB
  - adb connect IP\_ADDRESS
- Remount STB everytime after reboot
  - adb remount
- Compile code
  - cd jni
  - ndk-build
- Push compilation result to STB:
  - cd libs\armeabi-v7a
  - adb push libchal.so ./system/product/lib/.
  - adb push dtvplayer\_cli ./system/bin/.
